A; Title: A nicotinic acetylcholine receptor ligand of unique specificity, alpha-conotoxis
A; Molecule type: protein
A; Molecule type: protein
A; Molecule type: protein
A; Molecule type: confirmed by chemical synthesis
C; Comment: This alpha-conotoxin, as an acetylcholine receptor inhibitor, is a postsynaptic C; Superfamily: alpha-conotoxin
C; Superfamily: alpha-conotoxin
C; Keywords: acetylcholine receptor inhibitor; amidated carboxyl end; postsynaptic neurot F; 2-8,3-12/Disulfide bonds: #status experimental
F; 12/Modified site: amidated carboxyl end (Cys) #status experimental

A.Molecule type: protein
A.Residues: 1-10 <KAN>
A.Residues: 1-10 <KAN>
A.Rote: the structure of the peptide was confirmed by synthesis
C.Comment: The biological source of this peptide is spinal cord. It stimulates smooth must c.Superfamily: neurokinin B precursor
C.Superfamily: neurokinin B precursor
C.Keywords: amidated carboxyl end; hormone; spinal cord
F.10/Modified site: amidated carboxyl end (Met) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bur. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 15,

Patent No. 5811264
GENERAL INFORMATION:
APPLICANT: Altken, Jacqueline F.
APPLICANT: Lippincott, Julie A.
APPLICANT: Levine, Joseph D.
TITLE OF INVENTION: Proteins with Mutations to Decrease N-Terminal Methylation NUMBER OF SEQUENCES:
ADDRESSEE: Somatogen, Inc.
STREET: 2545 Central Avenue, Site FD-1
CITY: Boulder
STATE: Colorado
                                                                                                                                                              Sequence 11, Appl

; Patent No. 6028168
; GENERAL INFORMATION:
; APPLICANT: GOODMAN, MURRAY
TITLE OF INVENTION: LANTHIONINE BRIDGED PEPTIDES
; NUMBER OP SEQUENCES: 24
; CORRESPONDENCE ADDRESS:
```

```
IDENTIFICATION METHOD: amino acid analysis
IDENTIFICATION METHOD: and
IDENTIFICATION METHOD: and
IDENTIFICATION METHOD: and
IDENTIFICATION METHOD: mass spectrometry
OTHER INFORMATION: water is removed and
OTHER INFORMATION: thereby
OTHER INFORMATION: a -S- bridge is present between Cys and Ser

Sequence 24, Application US/08727688
Patent No. 5919638
GENERAL INFORMATION:
APPLICANT: Russell, John C.
TITLE OF INVENTION: Reagents and Methods for Detecting Prostate Tumors NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
STREET: Abbott Laboratories
STREET: 100 Abbott Park Road D377/AP6D
                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 9, Application US/09351048A

Patent No. 6472368

GERERAL INFORMATION:
GANDARION

APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, Orest W.
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: FUNCTION
FILE REFERENCE: 100086.403C1
CURRENT APPLICATION: NUMBER: US/09/351,048A

CURRENT FILING DATE: 1999-07-09
NUMBER OF SEQ ID NOS: 95
SOFTWARE: PatentIn Ver. 2.0
                                                                                   APPLICANT: Doherty, Patrick

Sequence 89, Application US/09490702B

Patent No. 6560542

RENERAL INFORMATION:
APPLICANT: Mandell, Arnold
APPLICANT: Shlesinger, Michael
TITLE OF INVENTION: Algorithmic Design of Peptides for Binding and/or Modulation of the TITLE OF INVENTION: Punctions of Receptors and/or Other Proteins
TITLE OF INVENTION: 1050-000500
TITLE OF INVENTION: Bunctions of Receptors and/or Other Proteins
TITLE OF INVENTION: 900-00-00050
CURRENT APPLICATION NUMBER: US/09/490,702B
CURRENT APPLICATION NUMBER: US/09/490,702B
NUMBER OF SEQ ID NOS: 96
SOFTWARE: PatentIn version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               APPLICANT: Pasqualini, Renata
APPLICANT: Ruoslahti, Erkii I.
TITLE OF INVENTION: Methods of Inhibiting Angiogenesis and
TITLE OF INVENTION: Methods of Inhibiting Angiogenesis and
TITLE OF INVENTION: Methods of Inhibiting Angiogenesis and
TITLE OF INVENTION: Methods of Inhibiting Angiogenesis and
TITLE OF INVENTION: Methods of Inhibiting Cancer by Using Superfibronectin

US-09406-781-63
i Sequence 63, Application US/09406781
i Patent No. 6306663
i GENERAL INFORMATION:
i APPLICANT: Kenten, John
i APPLICANT: Renten, John
i TITLE OF INVENTION: CONTROLLING PROTEIN LEVELS IN EUCARYOTIC ORGANISMS
i FILE REFERENCE: 2757-3
i CURRENT APPLICATION NUMBER: US/09/406,781
i CURRENT EILING DATE: 1999-09-28
i EARLIER FILING DATE: 1999-02-12
i SARLIER FILING DATE: 1999-02-12
i SARLIER PRILICATION NUMBER: 60/119,851
i SARLIER PRILICATION NUMBER: 05/119,851
i SARLIER PRILICATION OS: 67
i SEQ ID NOS: 67
i SEQ ID NOS 63
i IRNGTH: 13
i TYPE: PRT
i ORGANISM: Unknown Organism
i FEBTURE:
i OTHER INFORMATION: Description of Unknown Organism: binding peptide

Method for isolation of peptides from complex mixture of peptides involves specific chemical and/or enzymatic alteration of at least one type of peptide.

Example 20; Page 141; 193pp; English.

The present invention describes a method (M1) for the isolation of a subset of peptides from a protein peptide mixture (P1). M1 involves: (a) separating the protein peptide mixture into fractions of peptides via chromatography; (b) chemically, or enzymatically, or chemically and enzymatically, altering at least one amino acid of at least one of the peptides in each fraction, thereby generating a subset of altered peptides; and (c) isolating the altered (flagged) peptides out of each fraction via chromatography, where the chromatography of steps (a) and (c) is performed with the same type of chromatography. M1 can be used for

          mixtures. MI can also be used in diagnostic assays for detection of the presence, the absence or a variation in expression level of at least one protein marker or a specific set of proteins indicative of a disease state. MI can be used for identifying target proteins present in metastatic and invasive cancers, in differential expression of proteins in transgenic mice, identification of proteins that are upregulated or down regulated in disease tissues, in identification of intracellular changes in cells with physiological changes such as metabolic shift, in the identification of biomarkers in cancers and in the identification of signalling pathways. The method is gel-free methodology for qualitative and quantitative proteome analysis without the need for multidimensional chromatography and without the use of affinity tags. ABP74714 to ABP75190 represent peptide sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-calls (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a cyclophilin B peptide of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;
                                                                                                                                                                                                                                                                                                           The invention relates to a method for the detection of antigen specific T-cells in a blood sample involving the use of a plurality of antigenic peptides. The method comprises sampling of peripheral blood monocytes; stimulation of the collected peripheral blood monocytes with antigens without direct use of antigen presenting cells, and detection of T-cells specific to the antigen in the stimulated monocytes. The method is specific to the antigen in the stimulated monocytes. The method is quantitative determination of cancer so it can be used in semi-used for cancer vaccine therapy for patients with cervical or prostate cancer. The method can additionally be used to monitor of cellular
                                                                                                                                                                                                     A detection method of antigen specific T-cells, comprises the use of plural antigenic peptides, useful in semi-quantitative determination of cancer specific T-cell frequencies and for monitoring cellular immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     immunity and cancer immune therapy by defection of specific T-cell frequencies. Sequences ABR84350-ABR84365 represent HLA-A2 (human leukocyte antigen) peptides of human origin used in an example from the

This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytocoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

```
This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Screening, diagnosis or prognosis of Alzheimer's disease in subject, comprises detecting Alzheimer disease-associated features or Alzheimer disease-associated protein isoforms in brain tissue from the subject.
                                                                                                                                                                                                                                    Tumor antigen peptides derived from cyclophilin B for treatment and diagnosis of tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

The present invention relates to methods and compositions for the screening, diagnosis or prognosis of Alzheimer's disease (AD) in a subject. The method comprises analysing a sample of brain tissue from a subject by 2D electrophoresis to generate a 2D array of Alzheimer's disease-associated features (ADPS), whose relative abundance correlates with the presence, absence, stage or severity of AD and comparing the comparing the subminance of each feature with the abundance of that chosen feature in brain tissue from persons free from AD. The invention also describes to brain tissue. The methods and compositions of the invention are useful of or the screening the stage or severity of AD in a subject, for determining the stage or severity of AD in a subject, for determining the stage or severity of AD in a subject, for identifying a subject at risk of developing AD, or for monitoring the effect of therapy administered to a subject having AD. Antibodies capable of binding to ADPIS are useful for treating or preventing AD, and for determining the efficacy of a given treatment regime. An agent that modulates the cativity of ADPI is useful in the manufacture of a medicament for the treatment or prevention of ADPIS are useful abplied as subject. ABG67292-ABG68038 represent burnan ADPI tryptic digest peptides

of severity of Alzheimer's disease in a subject, for identifying a subject at risk of developing Alzheimer's disease, or for monitoring the effect of therapy administered to a subject having Alzheimer's disease. The method is also useful in treating vascular dementia, Lewy body dementia, schizophrenia, Parkinson's disease, multiple sclerosis or depression. The inventive method identifies sensitive and specific biomarkers for the diagnosis of Alzheimer's disease in living subjects. It provides therapeutic agents for Alzheimer's disease that works quickly, potently, specifically with fewer side effects. The present sequence represents the amino acid sequence of a Alzheimer's disease-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                           Gaps

This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                  This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cyclophilin B; human; tumour antigen peptide; cytotoxic T-cell; CTL; HLA antigen; diagnosis; tumour; therapy.
                                                                                                                                               Tumor antigen peptides derived from cyclophilin B for treatment and diagnosis of tumors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

```
Use of antigenic proteins, peptides, interferon or their encoding DNA, in the manufacture of an agent for the induction of antigen-specific {\tt T} cells.
                                                                                                                                                                                                                                                                                                                   This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                            Tumor antigen peptides derived from cyclophilin B for treatment and diagnosis of tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tumor antigenic peptide; interferon; IFN; antigen-specific T cell; virucide; cytostatic; gene therapy; IFN-alpha; cytotoxic T cell; viral infectious disease; cyclophilin B; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human cyclophilin B derived tumor antigenic peptide SEQ ID 17.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
